

HYCOL™ HYDROLYZED COLLAGEN

POWDER APPLICATION GUIDE

1

Use the powder on moderately to heavily exudative wounds. For initial application, debride the wound bed of slough and necrotic tissue. HYCOL™ Powder can be applied in targeted amounts using the puffer tip. The tip can also be removed for pouring powder into the wound.

2

Apply powder to the wound bed. The amount applied depends on the wound depth, size and amount of exudate. Initial application may require more powder than subsequent applications.

3

Be sure to cover the entire area of the wound bed and wound margin.

4

Gently push powder into any areas of undermining.

- Apply a secondary dressing appropriate for the level of drainage
- Reapply a minimum of 2-3 times a week or as necessary until exudate is controlled
